
electric floor polisher Bona Kemi Floor Finish

Posted by David Wadsworth - 2010/01/30 03:19

Hi! I have a house with about 1000 square feet of oak floor. About 5 years ago I had them professionally sanded and refinished with Bona Kemi products. I don't believe enough finish coats were applied because I am seeing scuff marks (which don't come out) and much more wear than I would have expected after 5 years. What I'd like to know is how difficult it would be for me to apply additional coats of the Bona Kemi products. I have an electric floor polisher that can be fitted with lightly abrasive pads to remove the scuff marks. I am thinking about starting in a closet to be sure I know what I'm doing before progressing to the rest of the house. I have seen several warnings about making sure the Bona Kemi finish is done by professionals only, and I wonder what's the big deal about Bona Kemi? Is there a learning curve necessary for Bona Kemi? I have successfully refinished some pieces of furniture.
